Pitch script: "Agent says… Data says…"

Property Hauz · Microburbs Hackathon · Saturday 7 November 2026 · Task: a social post on any finding

Format: pitch.mp4, about 70 seconds, landscape 16:9 for the room screen. Played for the room vote at 3:10 pm.

Script

Time	On screen	Voiceover
0–5s	Clip from the demo: the "10 YEARS." slam	"Ten years. That's how long a typical Glebe household would work to buy a unit."
5–12s	Title card: "Agent says… Data says…" · Property Hauz	"We're Property Hauz, and we turned that into a post that makes people check the numbers before they call an agent."
12–22s	Data montage: 29 suburbs · 14 datasets each · 1,755 mesh blocks analysed	"We pulled every City of Sydney suburb from the Microburbs API: prices, income, crime, growth and population, down to the block level."
22–32s	Three hypotheses with ✓/✗: income vs crime (weak, sensitive ✗) · crime vs price (no link ✗) · years of income to buy a unit ✓	"We tested a few ideas and dropped the ones that were weak or unfair to local communities. What held up was simple: how many years of income a unit costs."
32–42s	The finding: unit bars from 6.5 years (Alexandria) to 10.2 (Glebe), with crime meters and growth lines	"Across inner Sydney a unit costs six and a half to ten years of local income. But paying more doesn't buy you lower crime or faster growth."
42–52s	Their Instagram stat: 27 of 1,609 posts passed 100k views · geography explainers at 180–220k	"Microburbs' breakout posts take a big number and make it personal. We did the same with a format everyone knows: 'agent-speak, translated'."
52–60s	Demo clips: the agent cartoon, "Vibrant area!" → 4.4× stamp	"The agent joke makes people laugh. The data makes them comment their own suburb."
60–66s	README screenshot: every figure → endpoint	"Every number on screen traces to an API endpoint in our README. Nothing is rounded to make it look better."
66–70s	"Know your numbers before the agent does." · Property Hauz × Microburbs	"Know your numbers before the agent does. Thank you."

Why it should win votes

- It opens on the post's best moment, so the room is hooked straight away.

- The rejected hypotheses show rigour: we didn't just cherry-pick.
- It links to what works on Microburbs' own Instagram without promising view counts.

Figures used in the pitch

Figure	Source / calculation
Glebe unit: 10.2 years	$930,000 ÷ $1,760/wk ÷ 52
Alexandria unit: 6.5 years	$901,000 ÷ $2,650/wk ÷ 52
Surry Hills crime: 4.4× national	crime/summary, +336%
Glebe vs Surry Hills unit growth	+37% vs +83%, Aug 2011–Aug 2021
Data scope	29 suburbs × 14 endpoints; 1,755 mesh blocks with income and crime
Instagram benchmark	27 of 1,609 posts over 100k views; examples at 181k–221k (Microburbs task page)

All data: Microburbs Hackathon API, pulled 7 November 2026. Prices and crime rates are Microburbs modelled values. Full figure-by-figure sources are in README.md.
