Agent says… Data says…: Property Hauz, Microburbs Hackathon 2026

Task: A social post on any finding. `demo.mp4` is the finished 35-second vertical post (1080×1920).

Finding: Across inner Sydney, a median unit costs between about 6.5 and 10 years of a typical local household's gross income, depending on the suburb. A higher price doesn't come with lower modelled crime or faster past growth. So check the numbers before you talk to an agent.

Area: City of Sydney council area only. That's the hackathon key's coverage, so the post says "inner Sydney".

Every figure in the video and where it comes from

All data comes from the Microburbs Hackathon API (`https://api-ht.microburbs.com.au`), pulled on Saturday 7 November 2026 with team key `team-46`.

Figure on screen	Value	Calculation	Endpoint(s)
Glebe: 10 years for a unit	10.2 years	$930,000 median unit ÷ $1,760/wk median household income ÷ 52	`/v1/suburbs/Glebe (NSW)/market/all` (median_sale_price.unit); `/v1/suburbs/Glebe (NSW)/demographics/income-map` (median_weekly_income)
Start at 22, done at 32	22 + 10.2	Starting age 22 is an assumption	as above
37,200 smashed avos	$930,000 ÷ $25	$25 per serve is an assumption, shown on screen	as above

Figure on screen	Value	Calculation	Endpoint(s)
Alexandria: 6.5 years	6.5 years	$901,000 ÷ $2,650/wk ÷ 52	`/v1/suburbs/Alexandria/market/all`; `/v1/suburbs/Alexandria/demographics/income-map`
"Almost 4 years less"	3.6 years	10.2 − 6.5	derived
"Same-ish price"	$930k vs $901k	Glebe vs Alexandria median unit	`market/all`
Surry Hills: 4.4× national crime	+336%	1 + 336/100	`/v1/suburbs/Surry Hills/crime/summary` (vs_national_pct)
Glebe units +37% in 10 years	+37%	Median unit price, first month on or after Aug 2011 → Aug 2021	`/v1/suburbs/Glebe (NSW)/market/median-sale-price-series`
Surry Hills units +83%	+83%	same window	`/v1/suburbs/Surry Hills/market/median-sale-price-series`
"Slowest of these five"	Glebe +37% vs Alexandria +76%, Surry Hills +83%, Erskineville +66%, Darlinghurst +62%	same window	`market/median-sale-price-series`
Erskineville and Surry Hills: same 7.1 years	7.07 and 7.08 years	Erskineville $1,110,000 ÷ $3,020/wk ÷ 52; Surry Hills $850,000 ÷ $2,310/wk ÷ 52	`market/all`; `demographics/income-map`

Figure on screen	Value	Calculation	Endpoint(s)
Erskineville 1.5× crime	+52%	1 + 52/100	`/v1/suburbs/Erskineville/crime/summary`
"About a third of the crime"	0.35	1.52 ÷ 4.36	derived

Assumptions and caveats (also shown on screen)

- "Years of work" uses **gross** median weekly **household** income and assumes every dollar is saved: no tax, spending or interest. It's a comparison tool, not a savings plan.
- Prices are Microburbs modelled medians (`market/all`, as of 25 Oct 2026).
- Crime is a **modelled** rate (model trained on Queensland police mesh-block incidents, 2020–2022), compared with the national median. It isn't a count of NSW police records.
- Past price growth isn't a forecast. Not financial advice.
- The real-estate agent is a generic cartoon and doesn't depict any real person or agency.

Supporting files

- `script_v6_agent_says_data_says.xlsx`: the shot-by-shot script, the data points with live formulas, and accuracy checks.
- `hours_to_buy_with_crime.csv`: all 29 suburbs, with houses, units, hours, years and crime, plus data-quality notes.
- `suburb_summary.csv`, `pop_vs_price_2011_2021.csv`: wider analysis tables.
